IT312 Web Applications Engineering
Project – Phase#2
1st Semester of 1448 – 1449
Due date: Oct 29th

Website Description

Use HTML and CSS to build the website that your team designed in Phase 1. Implement the approved design after considering the feedback received on your Phase 1 submission.

Your website should include at least the pages described below.

Home Page

- The website name, logo, and a short description or mission.
- A navigation bar linking to the main pages of the website. Use CSS Flexbox to organize the navigation bar.
- A section showing at least three club offerings. Each offering should include an image, name, and brief explanation. Use CSS Flexbox to organize the offerings section.
- Apply an appropriate :hover effect to the offerings. When the user hovers the mouse over an offering, display additional information about that offering.
- A section containing club-member reviews about the offerings. Each review should include the offering name, a rating and written feedback. Use for each review.
- The Extra Section proposed in Phase 1. Apply suitable CSS styling to this section.
- A footer containing at least copyright and contact information.
- The navigation bar and footer should appear consistently across the website pages.

Club Offerings Page

- This page should display all available club offerings, including:
    - Offering name
    - Description
    - Price or registration fee
    - Image

  A free offering should have a price value of 0.
- The user should be able to sort the offerings according to the offering name or price. Use an <optgroup> HTML element to group related sorting criteria together, for example:
    - Price
        - Low to High
        - High to Low
    - Name
        - A–Z
        - Z–A

  Note: The actual sorting functionality will be implemented in Phase 3 using JavaScript. In Phase 2, students are only required to create and style the sorting control.

About Us Page

- Present the club's mission.
- Display a list of all activity leaders and instructors.
- For each activity leader or instructor, display the person's name and photograph. The list of activity leaders and instructors should be displayed so that the user can scroll through it horizontally.
- Each activity leader's or instructor's name must be a link to that person's Profile Page.
- The page must also include a Join Our Team form that allows the user to enter:
    - Name

- Photo
- Date of Birth
- Email
- Area of Expertise
- Skills
- Education

Activity Leader or Instructor Profile Page

Create a Profile Page for an activity leader or instructor.

Use an HTML <table> to organise the following information:

- Name
- Photo
- Date of Birth
- Email
- Area of Expertise
- Skills
- Education

The table must include spanning cells.

The cell containing the person's name must span all columns.

Style the table using CSS, including suitable borders, spacing, colours, and other appropriate visual properties.

Club Member Dashboard Page

The Club Member Dashboard should include a list of previous participation requests belonging to the club member.

For each request, show:

- Offering name
- Request date
- Cost
- Status: pending, declined, or completed

Use CSS Flexbox to create a section containing links to the following pages:

- Request to Join an Offering Page
- Offering Evaluation Page

The displayed requests and statuses are sample content only. No actual request processing or status management is required.

Request to Join an Offering Page

Create a <form> that allows a club member to enter a participation request.

The form should contain:

- A drop-down list for selecting an offering
- Member's full name
- Preferred date
- Submit button

Offering Evaluation Page

Create a <form> that allows the club member to evaluate a completed offering.

The form should include:

- A drop-down list for selecting a previous offering

- A rating control
- A written-feedback field
- Submit button

Club Manager Dashboard Page

The Club Manager Dashboard should include:

- A list of all offerings belonging to this manager.

Use CSS Flexbox to create a section containing links to the following pages:

- Add a New Offering Page
- Manage Activity Leaders and Instructors Page

Add a New Offering Page

Create a <form> for adding a new offering.

The form should ask for:

- Offering Name
- Image
- Price or Registration Fee
- Description

The form must include a Submit button.

Manage Activity Leaders and Instructors Page

This page should contain two sections.

The first section should contain a <form> that displays all available activity leaders and instructors.

For each person, display:

- Small image
- Name
- Checkbox

The checkboxes allow the manager to select one or more team members for deletion.

The second section should contain a <form> for adding a new activity leader or instructor. The form should request:

- Name
- Photo
- Date of Birth
- Email
- Area of Expertise
- Skills
- Education

Make sure that Delete and Add are submit buttons for their respective forms.

Instructions:

- Incorporate the feedback received on your Phase 1 submission.
- Convert every page represented in your approved sitemap into an actual HTML page. Verify that each page includes all required components such as links, images, forms, controls, and page titles.
- Each page's layout should closely resemble the wireframes submitted in Phase 1. If the sitemap or page layout is changed, include the revised sitemap and/or wireframes in the Phase 2 report.
- Use HTML5 to structure the page content.
- Use CSS to style and customise the website's appearance.

IT312 Web Applications Engineering
Project – Phase#2
1st Semester of 1448 – 1449
Due date: Oct 29th

جامعة الملك سعود
King Saud University
كلية علوم الحاسب والمعلومات
قسم تقنية المعلومات

- Use one external CSS file shared by all website pages to maintain consistent styling.
- Use CSS Flexbox where specifically required and where appropriate for organizing page content.
- Apply appropriate CSS styling to the Extra Section proposed in Phase 1.
- Include appropriate navigation on the website pages and use breadcrumbs where relevant.
- Link all pages correctly according to the sitemap. There should be no broken links.
- Use meaningful filenames for HTML pages, images, and other website resources.
- All HTML and CSS code must be valid. Validate the HTML and CSS before submission. (**Hint:** to validate HTML code go to validator.w3.org. To validate CSS, go to jigsaw.w3.org/css-validator).
- Forms in this phase represent the user interface only. No database, login system, actual registration, payment, addition, deletion, or status-management functionality is required.
- If Generative AI is used during the project, including for generating images or assisting with content document its use according to the project requirements.

Deliverables:

1. A compressed folder containing all website files (HTML, CSS, images, etc.).
2. Using the **Phase-2 Template** (in LMS-Project section), create a document with:
    1. The cover page contains your group number, students' information and their assigned tasks and your website logo and title.
    2. The wireframes, sitemap, and screenshots of your website pages (If you have changed the sitemap and /or wireframes, include the new versions).

Submission:

Submit all Phase 2 deliverables through LMS on **Thursday, October 29h, before 11:59 p.m.** to **Phase#2 Submission** in the Project page
